

Chécoin: A tool for recording health records and identity verification for the global market

Ché Bledsoe Che@Checoinbank.com

<https://www.Checoinbank.com>

Chécoin is a decentralized cryptocurrency that is based on the proof-of-stake algorithms to guarantee supreme security for keeping record of Covid-19 testers, other infectious diseases and their test results. An extraordinary cryptocurrency, which was designed to work with the sporting communities, sporting fans and other large groups to ensure everyone has been vaccinated and/or tested for Covid-19 (or other infectious diseases) prior to events (inside sports arenas, stadiums, schools, churches, etc.). This type of security establishes a trusted measure for fans, students and mingles to safely and comfortably enjoy themselves while interacting with others. Moreover, everyone will be assigned a **32-digit key address** which will keep record of their name, DOB, address, picture that verifies their identity and more. It is the initial verification process which allows the Chécoin to develop into an identification apparatus for each person globally while keeping record of their health, vaccinations shots and more.

The Chécoin was designed with sports in mind, to be the convenient verification tool for sporting event participants that reflect their infectious disease health status. Such as, recent COVID-19 test results and vaccination dates. This will allow participants to be quickly screened utilizing the confidential health information in the Chécoin Method app to determine ability to safely attend events and avoid cancellation of sports in the future. While professional sporting events are the initial target market, other sporting leagues such as collegiate and high schools will be served. Entertainment events and all large gathering spots that would benefit from knowing the current infectious disease health status of athletes/entertainer/spectators will be targeted- not excluding religious gatherings. Moreover, that is only the foundation of the coin. The initial verification process will be used to confirm everyone so that your individual address which is a 32 key imprint of your credentials may now serve as a stable form of identification.

This separates us from most competitors. We are a health recording, Identification shielding, cryptocurrency building, power structure. Chécoin is the future.

Ché Method

The Ché Method is a method in which individuals who have been COVID-19 tested and/or tested for other highly contagious diseases have their record of vaccination or testing of infectious disease recorded on the **Ché Method mobile app**. With our blockchain technology through our app, the world will never have to stop sports and entertainment again! Not even under a PANDEMIC! Why do people who aren't ill or have tested positive with a virus have to suffer under these circumstances? We say, "you shouldn't have to!" The wellbeing of every individual globally is important and should not be taken lightly. Moreover, the Ché Method carefully and meticulously was developed to protect us all. To do this, the individual who is planning to be in public may go inside stadiums, while patrons who plan to enjoy theme parks may do so according to a simple 3 step program. The first step is to download the Ché Method application on your cellular device. The second step is to simply take an infectious disease test or get vaccinated. We currently have partnerships with two of the largest laboratories in the USA. Nevertheless, the Ché Method app was designed to work with any doctor's office, laboratory or clinic to record results. The final step is to show your results of your test to the ticket taker at the game, amusement park or concert event you are attending. The Ché Method application which is platformed on **blockchain technology** is set to spearhead (safety for all who are in the public forum) this safe and secure system. This is the safest and most secure approach for recording test results, especially for individuals in populated environments. This creative technique combines COVID-19 testing, technology and cryptocurrency all in one application. Most people have phones; the application which is downloaded on your mobile device will maintain a record of the date, time, vaccination/testing location, healthcare provider, and healthcare administer of when the individual has been vaccinated and/or tested for COVID-19 or other infectious diseases. Moreover, the app is not limited to recording only infectious disease results. This application was designed to record anything that dealt with

identity and health shots records. The Ché Method application also has a section created for parents and guardians. Which allows young children to be accompanied with an adult and show proof of their test or vaccination on their parent or guardians mobile device.

Introducing Chécoin

Chécoin was developed during the very beginning of the Covid-19 pandemic, after seeing what damage it caused not only the USA, but globally. The Chécoin Method app and Chécoin wallet app are both built on the foundation of blockchain technology. The mission for Chécoin is to be a simple tool for recording health records and identity verification for the global market which empowers billions of people. The world truly needs a reliable cryptocurrency and health records infrastructure that together can be the future for stabilizing an economy even under the worst economic circumstances. An example of such are pandemics and worldwide health scares like Covid-19, H1N1, AIDS, and more. The time has come for technology to step in to secure a safe way to stop the transfer of said diseases and prevent the economy from global failure. Through vast research and careful detailing, we have found the most promising way to avert the aforementioned. Securing your health records on your mobile device through the safety of blockchain technology is certainly the future. It will soon be a common way of life to not only show proof of your identity, but proof of your screening for certain shots and infectious diseases. Having the option to continuously enjoy sporting events, restaurants, theaters, amusement parks should be safe, secure and comfortable with the assurance that everyone has proven who they are and that they are free of harmful, contagious diseases. The Ché Method's innovative and very contrived structure will enable the economy to stay steadfast throughout all sorts of disasters, even during an economic crisis. Chécoin cryptocurrency is a bonus to the main point of development which was the Ché Method application. The Chécoin Method app is intended to address the concern of sports fans everywhere who under no circumstances ever want to deal with the devastating ending of fan attended sporting events. The software that implements the Chécoin Blockchain is open source — designed so that anyone can build on it, and billions of people can depend on it for securing

their personal information and health screening records. With the abundance of smartphones and wireless data, more and more people will be online and able to access both the Chécoin Method app and Chécoin wallet app. To enable the Chécoin Method and to achieve this vision over time, the blockchain has been built from the ground up to highlight scalability, safety measures, proficiency in storing, and future adaptability. This amazing technology is set to spearhead this new and innovative feature for the future and now. The present circumstances under the coronavirus have halted so much around the world. The devastating effects of this pandemic has made it difficult globally to reset. Nevertheless, the future with the Ché Method and Chécoin can prevent this from happening again down the line.

32 Key Imprints

A 32-digit address is assigned to the individual upon downloading the application and completing the registration process. This code will stay with them for their natural life. This individual code will use the alphabet and numbers, will create a specific identification number assigned to the applicant.

These are the projects Chécoin is working on:

Professional Sports and Entertainment

Professional sports and entertainment are an integral part of society, especially economically. Making certain that all participants, athletes, spectators and fans have been screened appropriately to avoid the spread of infectious diseases is a plan that should have been established in the beginning of professional sports. Due to the fact of the thousands of individuals that take part in these sporting occasions, it is important that the vendors and proprietors of these events make sure we all are protected from super spreaders.

The test and/or vaccination record will be recorded on an application that was built on blockchain technology. This technology is especially needed for something so vital and important for everyone. Keeping the record safe and from hackers is equally important to make sure that the history is accurate. From the identity of the person to the test of disease or vaccination result, keeping these details on your mobile device on the Ché Method app is the safest way to keep the economy steady while making sure we all are protected from infectious diseases. This is especially needed under today's circumstances with COVID-19. The same way that the spectators will follow the Ché Method step by step, so will the athletes. It is essential that everyone who steps foot in all arenas, stadiums and outside events and large amounts of attendees, follow the simple steps of the Ché Method. There is not a better way to safeguard everyone collectively against pandemics caused by infectious diseases. Not only will this protect spectators and fans alike while they sit next to individuals they may not know. Moreover, it is comfort.

All concerts were prohibited during the pandemic of Covid-19 and that meant a cycle of negative effects were to happen because of it. The effects of the concerts and events being cancelled directly supported jobs and generated revenue for local businesses by pulling in tens of thousands of attendees which provide a substantial economic boost to the communities they are in. This happened in every major city in every state nationally.

Collegiate Sports / Youth Sports

Much like that of professional sports, collegiate sports are widely accepted throughout the world. The United States, where all sports revenue within the NCAA makes up about \$1 billion in earnings each year took a hard hit financially with the halting of sports at universities and colleges. Though some continued with play the unfortunate reality of not having fans and spectators was a reality many were not ready to accept. With packed stadiums and arenas every weekend and many days throughout the week, the Ché Method would be quite effective to avoid the spread of diseases and to counteract cancellations of future games and events. The youth and college aged adults have been linked to the rising numbers of the pandemic

surrounding Covid-19. With that fact the CDC has reported that youth sports and extracurricular activities, are spreading Covid-19. Youth sports and after-school activities appear to be causing COVID-19 clusters after several coronavirus outbreaks have been linked to school tournaments or extracurricular activities, according to the Centers for Disease Control and Prevention. Dr. Anthony Fauci said, “School sports, particularly team sports which people typically engage in close contact without masks. I think that is what’s explaining these surges of cases in young individuals.” Had the Ché Method been applied, not only would the number of occurrences have been a fraction of the millions of cases reported, but the millions of lives lost could have been avoided.

Ché Method App

The Ché Method application is an application which will keep an accurate record of patients who have been tested for infectious disease and/or vaccinated. The app is pertinent for allowing spectator sports to resume successfully. The app which is downloaded on any mobile device will maintain a time stamp record of the date, time, vaccination, or specific disease test, location, and identity of the individual. The identity is verified by the healthcare professional and stored in an internal database. Once the patient has been seen, she/he may now attend any sports or entertainment event of their liking by showing the ticketer their proof of vaccination or testing of infectious disease (within 24 hours of event).

2021-2024

Growth of Ché Method

Graph shows the potential revenue recovery that the Ché Method projects for the most dominant sporting leagues in the world

OVERVIEW ANALYSIS

2021 - 2024

Key Trends

Global Citizens everywhere downloading the Ché Method app which will allow safe social interaction by proving their negative status and avoiding another year of quarantining.

Market Driver #1

All of the leagues being able to return to a high level of filled stadiums and preventing billions of dollars lost due to the social gathering restrictions of the pandemic

Market Driver #2

Growing popularity and adoption of Chécoin and the Ché Method app for it's ability to keep the economy steady under pandemics and keeping spectator sports fully functioning.

The Opportunity

As Chécoin and Ché Method, we will continue to move forward in the world of cryptocurrency, blockchain technology and digitalizing everyone's identity globally. We think it is important to share our principles to make parallel the cryptocurrency community and the future of digitalizing all variables of our identity including health records as we create a world initiative.

- We believe that global acceptance of the Ché Method will create massive monetary equanimity and more business across the globe with or without a pandemic.
- We believe that people have an inherent right to control whether they choose to quarantine under outbreak situations if they can prove their safe health status while in public.
- We believe that all people should have an individualized 32 key imprint type of license as we all forge properly into the future.
- We believe that people will increasingly trust decentralized forms of authority.
- We believe that a global 32 key imprint and infectious disease digital medical record infrastructure should be set in stone for our future and children's future.
- We believe that we all have a responsibility to help advance health safety globally and unceasingly defend the dependability of the world.

Conclusion

The main goal for Chécoin and the Ché Method is to establish a more concrete way to ensure in fans, entertainers, spectators, and athletes are not carriers of infectious diseases while participating and/or attending events where the population is high. Following the Ché Method steps during these events helps to prevent the spread of highly transmissible illnesses, like COVID-19. We realize that halting entertainment, sports, and everyday life is not the most effective way to fight pandemics and to keep the economy unswerving. The verification process of the Ché Method promotes identity screening, and a 32-digit address is assigned to the

individual which will stay with them for their natural life. This is how the company will expand to not only a means of stopping the spread of diseases, but will also keep record of the individual, his or her health status, financial records and more. Due to the safe and secure method of building our application on block chain technology, the Chécoin was created to support this cause. In retrospect, it is like an I.D., medical records and spendable cryptocurrency in one.

Chécoin is a perpetual cryptocurrency built on a secure and executed open source blockchain, which will be the catalyst to the future of digital identity and its variants. While also helping to stabilize the economy even under the worst economic disasters.
